

ClinicEase — Brand & UI/UX Design Brief

Purpose of this document: Hand this to any designer or developer and they should be able to design/build ClinicEase's branding and interface without further clarification. It covers brand identity, visual system, component specs, and screen-level guidance.

1. Brand Overview

Name: ClinicEase **Tagline:** "Your care, simplified" **What it is:** A dedicated single-clinic appointment booking platform (5–6 doctors), replacing phone-based scheduling with online booking, real-time queue tracking, and automated reminders.

Brand personality (3 words): Warm. Trustworthy. Unhurried.

What ClinicEase is NOT: Not a sterile hospital-blue "corporate healthcare" look. Not a busy marketplace app (like Practo) with dozens of competing doctors and ads. It should feel like *one clinic's* calm, well-run front desk — digitized.

Tone of voice: Plain language, reassuring, never alarming. Always sentence case, never ALL CAPS. Time estimates are phrased as estimates ("Estimated 10:30–10:40 am"), never as guarantees.

2. Logo

Concept: A rounded icon of a heartbeat pulse line that resolves into a soft plus/cross shape, in white, on a solid teal circle — paired with a two-tone wordmark: "Clinic" in dark teal, "Ease" in warm coral, both in a rounded medium-weight sans-serif.

Provided asset: `clinicease_logo.svg` (included with this brief) — vector, infinitely scalable, editable in any design tool.

Logo construction rules:

- Icon and wordmark can be used together (primary lockup) or the icon alone (favicon, app icon, small spaces)
- Never separate "Clinic" and "Ease" onto different lines
- Never recolor the icon circle to anything other than the primary teal ( #0F6E56) on light backgrounds, or white on dark/photo backgrounds
- Minimum clear space around the logo: equal to the height of the icon circle on all sides
- Minimum size: 24px icon height (digital), 0.5 inch (print)

Don'ts:

- Don't add drop shadows, gradients, or outlines to the logo
- Don't stretch or skew

- Don't place on busy photographic backgrounds without a solid-color safe area behind it

3. Color System

Role	Color	Hex	Usage
Primary (brand)	Deep teal	 #0F6E56	Logo, primary buttons, headers, links
Primary light	Soft teal	 #5DCAA5	Secondary accents, progress bars, success states
Primary tint (bg)	Pale teal	 #E1F5EE	Card backgrounds, highlighted info boxes
Accent (CTA)	Warm coral	 #D85A30	Primary call-to-action buttons ONLY — "Book now," "Confirm & pay"
Accent tint	Pale coral	 #FAECE7	Subtle highlight backgrounds behind coral text/badges
Background	Warm off-white	 #FDFBF7  #FFFFFF	Page background — never pure white
Text primary	Charcoal	 #2C2C2A	Headings, primary body text
Text secondary	Warm gray	 #5F5E5A	Supporting text, captions
Text muted	Light gray	 #888780	Placeholders, timestamps, hints
Border	Warm light gray	 #D3D1C7	Card borders, dividers
Success	Green	 #3B6D11 (text) /  #EAF3DE (bg)	Booking confirmed, completed status
Warning	Amber	 #854F0B (text) /  #FAEEDA (bg)	Delay notices, "running late"
Error/Danger	Red	 #791F1F (text) /  #FCEBEB (bg)	Cancellations, no-show, errors

Rule: Coral is reserved for the ONE primary action per screen. If a screen has multiple buttons, only one may be coral — the rest use teal (secondary) or an outlined/ghost style.

4. Typography

Use	Font	Weight	Notes
Headings (H1-H3)	Poppins or Nunito	500 (medium)	Rounded, friendly — never bold/700, it looks aggressive
Body text	Inter or Work Sans	400 (regular)	Highly readable at small sizes
Buttons/labels	Same as body	500	Sentence case always, never Title Case or ALL CAPS

Size scale (desktop / mobile):

- H1: 32px / 26px, line-height 1.25
- H2: 24px / 20px, line-height 1.3
- H3: 18px / 16px, line-height 1.4
- Body: 15px / 14px, line-height 1.6
- Caption/hint: 12px, line-height 1.5

Never go below 12px for any text, including on dense admin screens.

5. Iconography

- Style: **outline icons only** (not filled/solid), consistent stroke width, rounded line caps
 - Recommended set: Tabler Icons (open-source, matches this style exactly) or Phosphor Icons
 - Icon color inherits from surrounding text color — never a separate hardcoded color unless it's a status icon (e.g., green check for completed)
 - Standard sizes: 16px (inline with text), 20px (buttons/nav), 24px (feature highlights)
-

6. Spacing & Layout Grid

- Base spacing unit: **8px**. All padding/margins should be multiples of 8 (8, 16, 24, 32, 48px)
- Card padding: 16–24px
- Section vertical spacing (landing page): 64–96px between major sections
- Max content width (desktop): 1200px, centered, with 24px side gutters

- Breakpoints: Mobile (<640px) / Tablet (640–1024px) / Desktop (>1024px)
 - **Mobile-first:** design and build the mobile layout first, then expand — most patients will book from a phone
-

7. Corners, Borders & Elevation

- Card corner radius: **12–16px**
 - Button/input corner radius: **10px**
 - Border style: 0.5–1px solid, using the border color from Section 3 — never harsh black borders
 - Shadows: minimal to none. If used at all, a single soft shadow on modals only (e.g., `0 4px 16px rgba(0,0,0,0.08)`) — flat design otherwise
 - No neumorphism, no glassmorphism, no heavy drop shadows
-

8. Core Components

Buttons

- Primary (coral fill): main action per screen only
- Secondary (teal fill): supporting actions
- Ghost/outline (teal border, transparent fill): tertiary actions ("Cancel," "Meet our doctors")
- Height: 44px minimum (touch-friendly), 12–22px horizontal padding
- Disabled state: avoid entirely where possible; if needed, 40% opacity + no pointer events

Cards

- White (`#FFFFFF`) or pale-tint background, 12–16px radius, 0.5px border, no heavy shadow
- Used for: doctor profile cards, appointment cards, dashboard stat cards

Status badges/pills

- Rounded full pill shape, background = tint color, text = corresponding dark shade from Section 3 (e.g., booked = teal tint bg + teal text; cancelled = red tint bg + red text)

Queue/ETA indicator

- A slim progress bar (teal or coral fill on a pale track) paired with plain-language text: "Currently serving token #4 of 12" — never just a bare number with no context

Forms

- Input height: 44px, 10px radius, border color from Section 3, focus state = 2px teal outline
 - Labels above fields (not placeholder-only), sentence case, no colons
-

9. Loader / Splash Screen

- Centered logo icon on the warm off-white background
 - Subtle pulse animation (scale 1 → 1.08 → 1, opacity 1 → 0.85 → 1, ~1.8s loop) — never a generic spinner
 - Wordmark below icon, small tagline below that ("Your care, simplified")
 - Three small dots below as a loading indicator, using teal shades
 - Must respect `(prefers-reduced-motion)` — fall back to a static logo with no animation for users who've disabled motion
 - Maximum display time: should disappear the instant the app is ready; never artificially delayed
-

10. Navbar

- Sticky/fixed to top on scroll
 - Left: logo (icon + wordmark)
 - Center or right: nav links — Home, Doctors, Services, About, Contact (sentence case, 13-14px)
 - Far right: primary CTA button, coral, "Book appointment" — always visible, never scrolled out of view
 - Mobile: collapse nav links into a hamburger menu; keep logo and the "Book appointment" button visible at all times
 - Clickable phone number in the navbar or a persistent top bar is recommended for clinics — patients trust a real number they can tap to call
-

11. Hero Section (Landing Page)

Structure (in order):

1. Small eyebrow label above headline (e.g., "Trusted clinic in [city]") — teal, small, medium weight
2. One-line headline stating the core value prop directly (e.g., "Quality care, without the wait") — never generic "Welcome to our clinic"
3. One-line supporting subtext (what the patient can actually do — book, get a real time estimate, skip the wait)
4. Two CTAs: primary (teal or coral) "Book an appointment," secondary (ghost) "Meet our doctors"

5. Small trust-stat row: number of doctors, years serving the area, weekly patients — builds credibility without needing testimonials yet
6. Hero image: **real photography** of a doctor with a patient, warm natural lighting — never sterile stock photos of stethoscopes on white backgrounds. If real photography isn't available yet, use a simple warm-toned illustration instead of generic stock

Below the fold (recommended order):

1. Specialty/service icon grid (quick visual navigation — Dentist, Pediatrics, General, etc.)
 2. "Meet the doctors" — photo cards linking directly into the booking flow
 3. "How it works" — simple 3-step strip: Book → Get your token & estimated time → Walk in, no wait
 4. Location, hours, and an embedded map
 5. Footer: contact info, quick links, social (if applicable)
-

12. App Screens — Design Notes by Role

Patient app

- Doctor list, doctor detail, symptom-to-specialty helper, booking + payment flow, "my appointments" (with live ETA), waitlist status, dependent management, notification center
- Core UX principle: **queue transparency over false precision** — always show an ETA window plus live "currently serving token #N," never a bare static time

Doctor dashboard

- Today's queue (token list, not a fixed-slot calendar), availability/capacity editor, one-tap "running late" delay control, patient detail panel

Admin dashboard

- Denser, desktop-oriented layout is acceptable here (unlike the patient app) — combined schedule grid, manual booking/walk-in tools, doctor management, payment records, performance analytics
 - Can use a more compact information density than the patient-facing screens, but must still follow the same color/type/spacing system
-

13. Imagery & Photography Guidelines

- Prefer real photos of the actual clinic, doctors, and (with consent) patients over any stock imagery
- Warm, natural lighting — avoid harsh clinical fluorescent-lit photos

- Show shared human moments (doctor listening to a patient, a smile, a handshake) rather than procedural/clinical shots (needles, equipment close-ups)
 - If stock is unavoidable, choose warm-toned, diverse, candid-feeling photography — never sterile all-white studio shots
-

14. Voice & Microcopy Guidelines

- Sentence case everywhere — buttons, headings, labels
 - Active voice, verb-first buttons: "Book appointment," not "Appointment booking"
 - No exclamation marks on system messages
 - Errors say what happened and what to do next, calmly — e.g., "That slot just got booked. Try another time." not "Error: booking failed."
 - ETA and queue language is always phrased as estimate/guidance, never a guarantee (see Section 8, Queue/ETA indicator)
 - Symptom-to-specialty helper results must always carry a visible disclaimer that it is general guidance, not a medical diagnosis
-

15. Accessibility Requirements

- Minimum text contrast: WCAG AA (4.5:1 for body text, 3:1 for large text/headings)
 - Minimum tap target size: 44×44px on mobile
 - Never rely on color alone to convey status — always pair color with text or an icon (e.g., a red pill also says "Cancelled," not just red)
 - Respect `(prefers-reduced-motion)` for all animations (loader, transitions)
 - Font size never below 12px anywhere in the product
-

16. Responsive Breakpoints

Breakpoint	Width	Notes
Mobile	< 640px	Primary design target — most patient traffic
Tablet	640–1024px	Nav may stay expanded or collapse depending on content
Desktop	> 1024px	Full navbar, two-column hero, denser admin dashboard layouts allowed here

17. Deliverables Checklist (What to Hand Back)

A designer/developer picking this up should deliver:

- ☐ Logo files: SVG (vector master), PNG exports at 512px/256px/128px/64px, favicon (32×32, 16×16)
 - ☐ Figma (or equivalent) file with: color styles, text styles, and component library (buttons, cards, badges, inputs) matching Sections 3–8
 - ☐ Loader/splash screen (static + animated spec)
 - ☐ Landing page: navbar, hero, service grid, doctor cards, how-it-works, footer
 - ☐ Patient app screens: doctor list, doctor detail, booking/payment flow, appointments dashboard, waitlist, dependents, notifications
 - ☐ Doctor dashboard: queue view, availability editor
 - ☐ Admin dashboard: schedule grid, manual booking, analytics
 - ☐ A short style tile / one-pager summarizing colors, type, and logo usage for quick reference
-

18. Reference Assets Included With This Brief

- `clinicease_logo.svg` — primary logo lockup (icon + wordmark), vector, ready to place in any design tool
